

Please reject NAB's 04-160 The traffic and weather services offered on XM radio are priceless in my profession as a trucker. These services are not available on a traditional broadcast radio. Some local programming may offer some of this information however knowing where on the dial to find it and at what time can prove fruitless. I am in a different city every day and this information is vital to my work. It looks as though the NAB is trying to keep their inferior product profitable by lobbying for legislation to snuff out the competition as there is no other reason for this action. It is my hope the governing board can see through this and vote against the petition. thank you  
John Hemli
